Snap-action switches, S840, S845, S846 Series

Single-break SPDT with positive opening operation and self-cleaning contacts

S840 Series snap-action switches feature VDE-approved positive opening operation, which guarantees a reliable opening of the NC contact even when welded due to a short-circuit or overload currents . Self-cleaning, wiping contacts ensure high reliability even at low electric loads.

The snap mechanism allows for fast and precise switching at a speed essentially independent of actuator speed.
S845 and S846 Series switches are SPST versions with NC and NO contacts respectively.

Features

Series S840/S845/S846

Positive opening operation: Forced opening of NC contact even when welded, in compliance with IEC 60947-5-1, annex K

Self-cleaning contacts: Constantly low contact resistance ensures high contact reliability over the entire design life of the switch

Single-break contacts: SPDT but also SPST-NC and SPST-NO versions available. Compact design.

Ingress protection rating: IP40 in accordance with IEC 60529

IP40 max

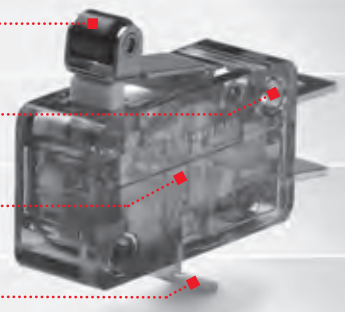
Precision switch: High switching accuracy and resistance to shock and vibration

Contact finish: Silver or gold-plated

Ag / Au

Switch construction and function

Series S840/S845/S846



- **Actuator**
  - Standard: push button
  - Auxiliary actuator: Plain lever / Roller / Simulated roller
- **Mounting**
  - Side mount (ganging)
- **Contact area**
  - Single-break SPDT / SPST-NC / SPST-NO
  - Positive opening operation and wiping contacts
  - Contact finish: Silver or gold-plated
- **Terminals**
  - M3 screw with saddle clamp
  - Flat tabs
  - Solder lug terminals

Competence

The success of a product is owed to its quality

The Schaltbau product line is clearly defined and adapted to customer needs. Behind every individual snap-action switch you will find decades of experience in engineering and manufacturing.

Snap-action switches are designed with a snap mechanism that allows extremely fast switching, practically regardless of the duration of actuation. This reproduces the operating position precisely, and controls the arc more efficiently.

In Schaltbau's snap-action switches the safety function can be seen - with their transparent-green housing, they are known all over the world.

Applications

Series S840/S845/S846

The switches are designed for use with systems and components that require a high degree of safety and reliability, such as

- Gear limit switches for wind energy applications
- Safety limit switches in electrical installations and control systems

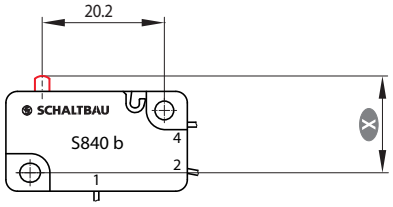
Actuator options, actuator positions

Series S840/S845/S846

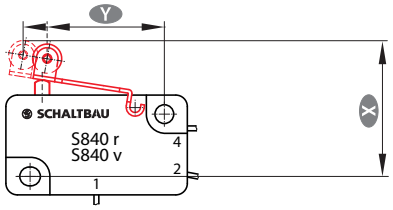
- **S840 b xx/xx** Push button (standard)



Note: To ensure correct operation of the positive opening function it is necessary to depress the plunger to the point of total positive opening travel. However, it must not be pushed beyond total travel position. Data is valid for new switches.

Actuator position	Push button (standard) b Actuator travel X in mm
Free position	16.0 ± 0.1
Operating position	14.8 ± 0.2
Release position	15.0 ± 0.2
Total positive opening travel	13.6
Total travel position	13.5 min.
Movement differential (between operating and release position)	0.2 (typical)

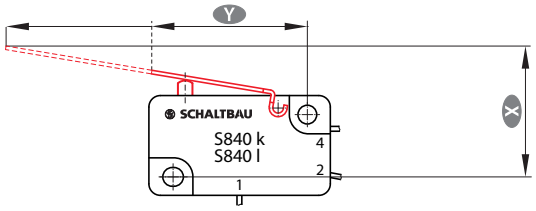
- **S840 r xx/xx / S840 v xx/xx** Roller lever / Roller lever, short



Note: To ensure correct operation of the positive opening function it is necessary to depress the plunger to the point of total positive opening travel. However, it must not be pushed beyond total travel position. Data is valid for new switches.

Actuator position	Roller lever r Travel X in mm	Roller lever v Travel X in mm
Lever length Y	22.7	19.1
Free positon	22.4 ± 0.3	21.9 ± 0.3
Operating position	21.1 ± 0.4	20.7 ± 0.4
Release position	21.3 ± 0.4	20.9 ± 0.4
Total positive opening travel	19.5	19.6
Total travel position	19.35 min.	19.4 min.
Movement differential (between operating and release position)	0.3 (typical)	0.3 (typical)

- **S840 k xx/xx / S840 l xx/xx** Plain lever, short / Plain lever, long

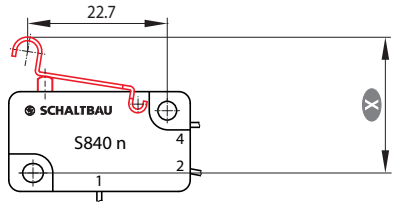


Note: To ensure correct operation of the positive opening function it is necessary to depress the plunger to the point of total positive opening travel. However, it must not be pushed beyond total travel position. Data is valid for new switches.

Actuator positions	Plain lever k Travel X in mm	Plain lever l Travel X in mm
Lever length Y	25.7	49.2
Free position	17.3 ± 0.2	21.5 ± 0.8
Operating position	15.9 ± 0.3	17.6 ± 1.0
Release position	16.1 ± 0.3	18.3 ± 1.0
Total positive opening travel	14.15	---
Total travel position	14.0 min.	13.5 min.
Movement differential (between operating and release position)	0.2 (typical)	0.7 (typical)

Actuator options, actuator positions (continued)

- **S840 n xx/xx** Simulated roller lever

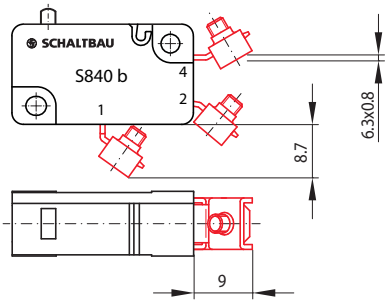


Note: To ensure correct operation of the positive opening function it is necessary to depress the plunger to the point of total positive opening travel. However, it must not be pushed beyond total travel position. Data is valid for new switches.

Actuator positions	Simulated roller lever n Actuator travel (X) in mm
Free position	22.4 ± 0.3
Operating position	21.1 ± 0.4
Release position	21.3 ± 0.4
Total positive opening travel	19.3
Total travel position	19.2 min.
Movement differential (between operating and release position)	0.3 (typical)

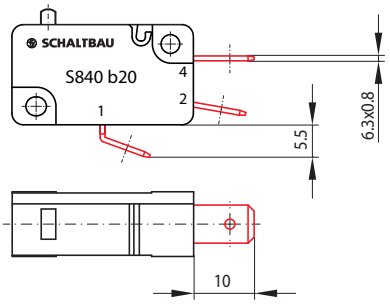
Terminal styles

- **S840 x xx/–** M3 screws



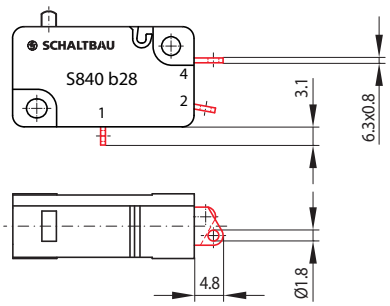
Note:
- *Single and multiple-wire conductors with wire gauges AWG 18 ... 12 (0.75 mm² ... 2.5 mm²) can be clamped without wire end ferrules. If a ferrule is used the maximum wire gauge is AWG 14 (1.5 mm² max.)*
- *Max. 2 conductors with the same wire gauge can be clamped per terminal.*
- *Tightening torque of terminal screws should be 0.5 Nm.*
- *Ingress protection rating of terminals: IP00*

- **S840 x xx/20** Flat tabs



Note:
- *Suitable for flat tabs 6.3 x 0.8 mm*
- *Ingress protection rating of terminals: IP00*

- **S840 x xx/28** Solder lugs



Note:

Hand soldering:
- *Soldering apparatus: Hand-held soldering iron*
- *Solder: Flux-filled solder wire, leadfree*
- *Temperature/duration: 400°C; 5 s * max.*
- *Ingress protection rating of terminals: IP00*

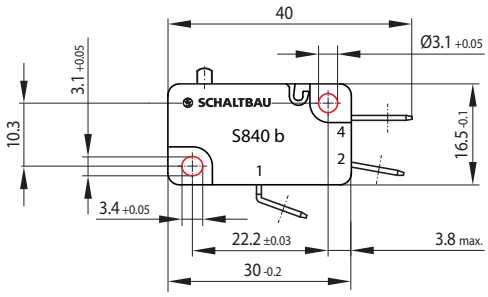
Mounting

Use of roller levers

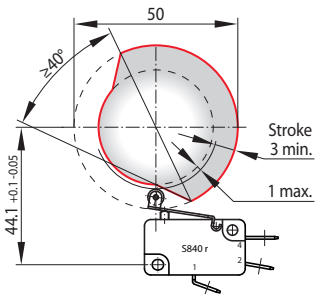
Series S840/S845/S846

Ganging (side mount)

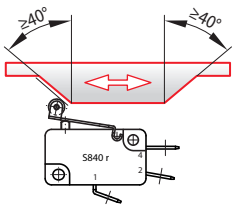
- through the two transversal holes in the body of the switch by means of a collar screw or threaded bolt .
  Tightening torque 0.7 Nm max.
- Alternatively, DUO-clips or retaining rings can be used.



Switch with roller lever actuated by cam disc



Switch with roller lever actuated by linear cam



When to use a roller lever?

- *Snap-action switches are designed for actuation with and without a roller lever.*
- *A roller lever is required if the direction of actuation deviates more than ±15° from the plunger axis.*

Mounting and safety instructions, environmental conditions

Series S840/S845/S846

Mounting instructions:

- Snap-action switches should be mounted by qualified professional staff only.
- Observe the required clearance and creepage distances. This is also true for connected wires.
- It is necessary to use insulating plates when ganging or mounting switches on uninsulated surfaces.
- The switches can be mounted in any desired position.
- When mounting the switches mechanically make sure to have 2 fastening elements (e.g. screws).
- Only use adequate fastening elements such as cylinder head or collar screws and DUO-clips. The values for maximum tightening torque must not be exceeded.
- The actuator should not be pre-tensioned when in the free position. When actuated the actuator should travel beyond the operating position, for at least 50% of the predefined overtravel, all the way to total travel position.
- Avoid tilting the screw when mounting and prevent mechanical tension on the housing.
- To ensure the proper function of the positive opening operation it is necessary to depress the plunger to the end of the positive opening travel.
- To prevent mechanical destruction of the switch, make sure that actuation of the switch does not exceed the specified total travel position. Avoid using the switch as a mechanical end stop.
- High-impact actuation of the switch can also have a negative effect on its mechanical life.
- When securing stripped wire ends in the terminal clamp, make sure the wire insulation is flush with the clamp.
- Make sure that strain relief of the connected leads functions.
- Prevent transfer of forces to the switch terminals.

Non-permissible environmental conditions:

- Cleaning agents, adhesives, solvents, or screw-retaining varnish must be compatible with polycarbonate. Never use chemicals not compatible with polycarbonate.
- Using chemicals which are not compatible with polycarbonate can result in cracks, deformation, breakage and dissolution of the housing or complete destruction of the switch.

Standards

- **IEC 60947-1:** Low-voltage switchgear and controlgear, Part 1: General rules
- **IEC 60947-5-1, Annex K:** Special requirements for control switches with direct opening action
- **UL508:** Industrial control equipment
- **IEC 60529:** Degrees of protection provided by enclosures (IP Code)
- **UL 94V-0:** Flammability Standard
- **DIN 41636-2:** Sensitive switches for communication technology; dimensions, type A
- **DIN EN ISO 13849-1:** Safety of machinery - Safety-related parts of control systems - Part 1: General principles for design
- **IEC 60068-2-6:** Environmental testing - Part 2-6: Tests - Test Fc: Vibration (sinusoidal)
- **IEC 60068-2-27:** Environmental testing - Part 2-27: Tests - Test Ea and guidance: Shock

Safety instructions:

- Be sure to make visual inspections regularly.
- Improper handling of the switch, e.g. when hitting the floor with impact, can result in breakage, visible cracks and deformation.

Defective parts must be replaced immediately!

Electrical Components and Systems for Railway Engineering and Industrial Applications

Connectors

- Connectors manufactured to industry standards
- Connectors to suit the special requirements of communications engineering (MIL connectors)
- Charging connectors for battery-powered machines and systems
- Connectors for railway engineering, including UIC connectors
- Special connectors to suit customer requirements

Snap-action switches

- Snap-action switches with positive opening operation
- Snap-action switches with self-cleaning contacts
- Enabling switches
- Special switches to suit customer requirements

Contactors

- Single and multi-pole DC contactors
- High-voltage AC/DC contactors
- Contactors for battery powered vehicles and power supplies
- Contactors for railway applications
- Terminal bolts and fuse holders
- DC emergency disconnect switches
- Special contactors to suit customer requirements

Electrics for rolling stock

- Equipment for driver's cab
- Equipment for passenger use
- High-voltage switchgear
- High-voltage heaters
- High-voltage roof equipment
- Equipment for electric brakes
- Design and engineering of train electrics to customer requirements
